PROFESSIONAL SUMMARY

I'm a full-stack engineer, proficient in Node.js, TypeScript, and React, with experience in the delivery of scalable and maintainable systems in fintech and healthcare. I design clean, resilient backend architectures, along with intuitive front-end interfaces focused on improving performance and reliability across the products I work on.

SKILLS

Languages & Databases: Javascript, TypeScript, Python, MongoDB, MySQL, Postgres.

Frameworks & Libraries: React, Next.js, Node.js, Express.js.

Others: Microservices, Docker, Git, bash.

WORK EXPERIENCE

Software Engineer

RedBlackTree Technologies Pvt. Ltd.

Mar 2024 - Oct 2024

- **Implemented complete backend logic** for USP productivity apps such as a weekly planner and a personal planner.
- **Built a learning management system** to allow easier tracking of skill building and evaluation across the organization.
- **Built a resume parser** in conjunction with Google Cloud's Vertex AI tool to add data of the shortlisted candidates into the system of and generate their profiles automatically.
- Improved functionality of **5+ applications** and processed multiple bug fixes.

Full Stack Developer

DigiiGo Technologies

Jul 2023 - Mar 2024

- Worked on various full-stack projects on both frontend and backend.
- Tasked with the development of multiple UI systems for **2+ projects** and provided **200+ bug fixes**.
- Contributed to the **design and development of multiple SQL-compliant databases**.

Software Development Engineer

Treflo (Ardour Labs Private Limited)

Mar 2022 - Jun 2023

- **Developed and maintained the infrastructure** for various USPs of the Treflo web application to increase app usage by almost 40%.
- **Independently developed critical features** such as automated e-invoice generation, GSTR reports and subscription infrastructure, working on both frontend & backend resulting in a substantial increase in the number of paid users.
- Upgraded the onboarding process for the OfficePulse application (another application under Ardour Labs) to allow parties to register and place orders in a more efficient and simplified manner, **improving operations and delivery speed by 25%**.
- **Processed 300+ change requests** with zero defects and wrote test cases for over 20+ features.
- **Conducted research and developed POCs** for a proprietary token-based Dapp on the Ethereum blockchain.

Application Developer

Vocuni (Prodigio Learnings Private Limited) [internship]

Sept 2021 - Feb 2022

- Refactored and maintained the company's employment service portal and learning management system.
- Restructured and simplified the onboarding and job application processes including UI changes to help **increase the site usability by almost 30%** and improve navigation within and in between multiple subdomains.
- Added **standard security measurements and safeguards** to the server to tackle and prevent malware attacks.
- Developed an independent student-registration & attendee-tracking system as an alternative to Google Forms for **25+ online workshops** and courses, giving access to more detailed datasets for the stakeholder's usage.

Frontend Developer

DigiiGo Technologies [internship]

Apr 2021 - May 2021

- Worked with domain experts to gain knowledge and subject matter expertise in frontend web development with complex frameworks.
- Tasked with development on **15+ fluid UI screens** for various projects along with frontend data management using react-redux.
